BABA Home Network System

SMART Door Lock Evolution

Imaginary password function

If you worry about exposing password to others, you can use any numbers with your actual password to use it safely.

High temperature sensor function

When inside temperature exceeds 55 degrees, there will be alarm sound while door gets automatically opened.

External double lock function

When leaving house, this function helps to make an alarm sound when someone is trying to open lock with any other ways than card or fingerprint.

Internal double lock function

Except for master, this function deactivates any opening method from outside by blocking any external recognition methods.

60 Seconds (LOCK) function

When incorrect password is entered 5 times in a row, there will be alarm sound and door stops operating for 60 seconds

Intrusion and breakage alarm

When strange opening action is detected, there will be high sound alarm (80db) to prevent damage through alarming

Electric shock function

Even when high voltage is applied to lock from outside, door lock does open to prevent any damage

Door shake prevention function

It is the special anti-shake technology patent that only Pushpull System has to prevent any door shake problem

Creating Newness Once Again

"Mounting WiFi function module"
"Applying anti-shake technology"
