

INECO INC. was established to make a pleasant and safe space with functional eco-friendly construction materials that clean up various environmentally harmful substances and pollutants created in the space where we're living.

Harmful substances in an indoor space are generated by not only construction materials but also furniture, household appliances, food waste, pets, and so on.

It's almost impossible to dispose of damage caused by these pollutants with the existing eco-friendly construction materials. That's why it's important to use the functional eco-friendly construction materials.

To use the functional eco-friendly construction materials more conveniently and economically and even add aesthetics of space, all the executives and staff members of INECO INC. are continuously attempting fusion with new materials and new technologies. We'll continue to strive so that the efforts can help create a healthy and unique space for those who use our products.

We promise to be an honest company doing our best with the priority given to human beings and nature.

INECO INC. CEO 

아이
에코 IECO

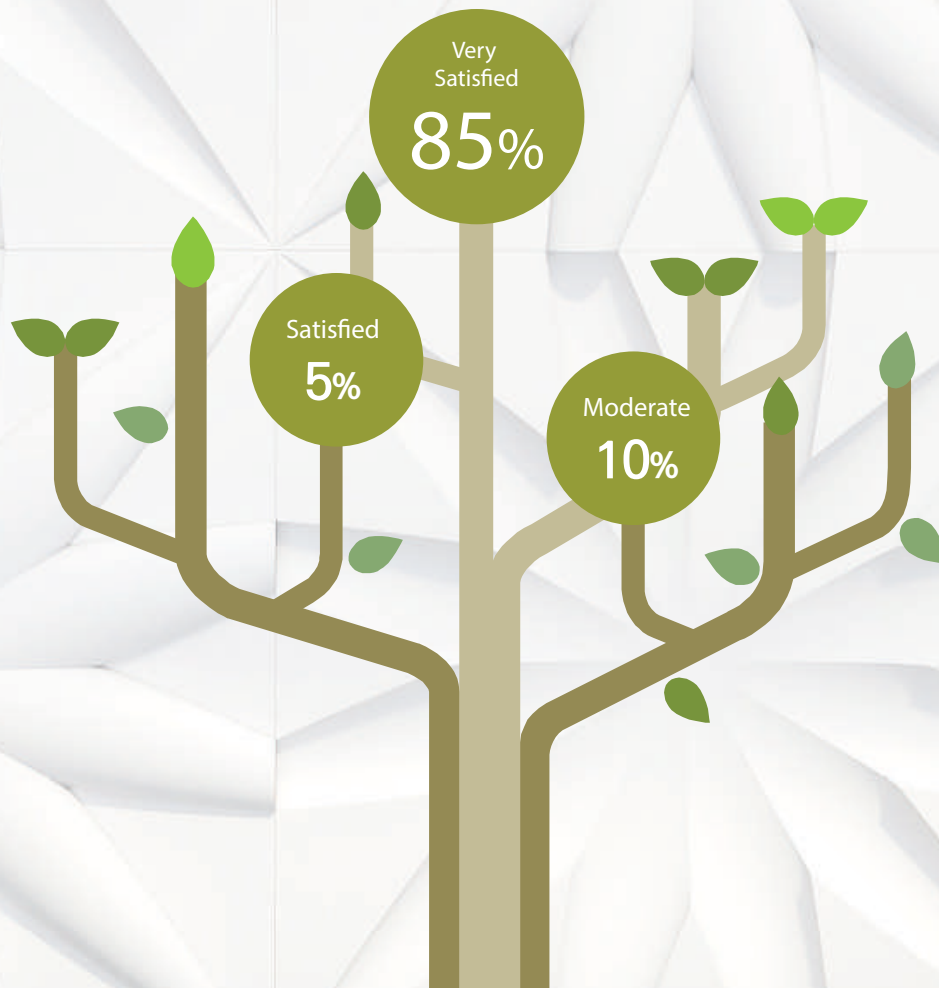

IECO is a brand of functional eco-friendly construction materials that make our space pleasant, utilising characteristics of natural porous materials and purifying the air of space with the functions of harmful substances purification, odour removal, and humidity control. The product also has other convenient functions such as insect control (especially mosquitos), immunity improvement, fire resistance, and sound absorption strengthening.

Kineco

KINECO is a brand that allows you to remember childhood memories and give you comfort. It's the new name for INECO INC. by combining Kids and Eco.

(Our Survey/Using the macro and the monitor)

IECO&KINECO Block has seven safety features to keep happiness of everyone.

IEco Block&KINECO that Creates Fresh Air and Healthy Life

Through the invisible functionality of micro hole, it purifies the air in the house and creates clean air.
IECO & KINECO Block conveys its 'healthiness' to you.

First of safety

01.Maintaining a pleasant and adequate humidity

Second of safety

02.Environmental pollution, such as TVOCs, etc.

Third of safety

03.The amenities of liberalizing the smell of life

Fourth of safety

04.Mosquito repellent bug Additional

fifth of safety

05.Immunogenetic function

Sixth of safety

06.The amenities of liberalizing the smell of life

Seventh of safety

07.The highest level of flame-Retardant Material
CE:A-1 Grade

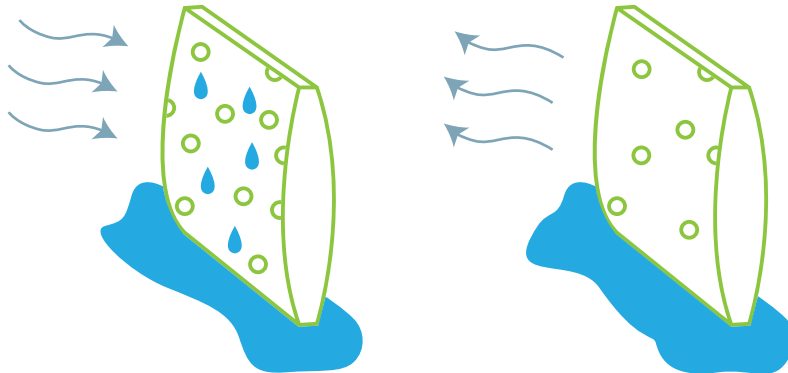

01.Moderate Humidity

- When the humidity is high, it absorbs and store moisture and blocks the dew condensation to suppress breeding of ticks, mould, and so on.
- It is effective to reduce respiratory diseases such as dermatitis and cold by releasing the stored moisture when the humidity is low.
- It helps to maintain a pleasant and healthy space with moderate humidity.

Normal Wall

There are few holes that adsorb humidity.
(Moisture is hardly adsorbed.)

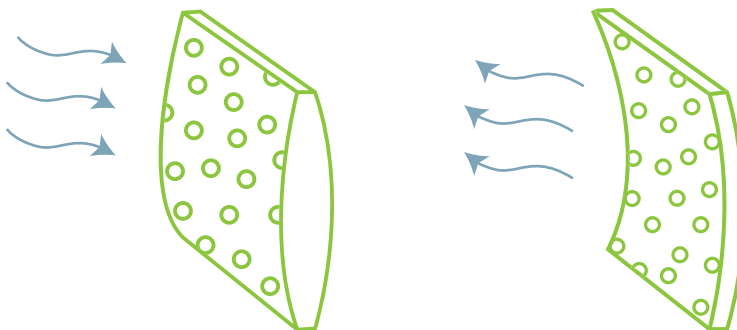

Window of Normal Wall

Wall with IECO & KINECO Block

It maintains a pleasant indoor environment by adjusting indoor humidity with many holes that can adsorb humidity.

There are many holes that adsorb humidity.
(The indoor environment becomes pleasant.)

Wall with IECO & KINECO Block

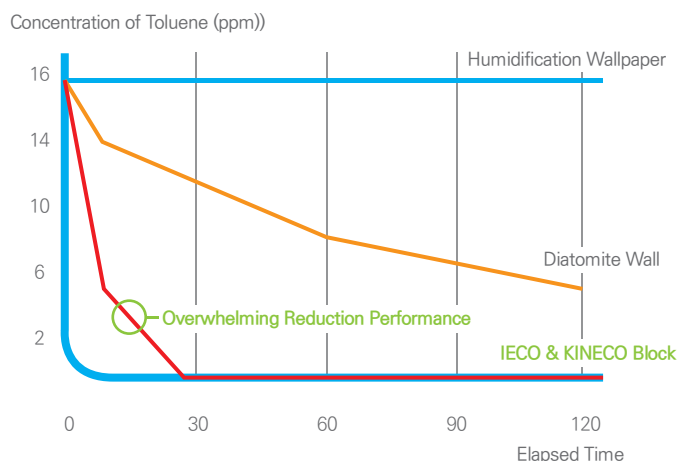

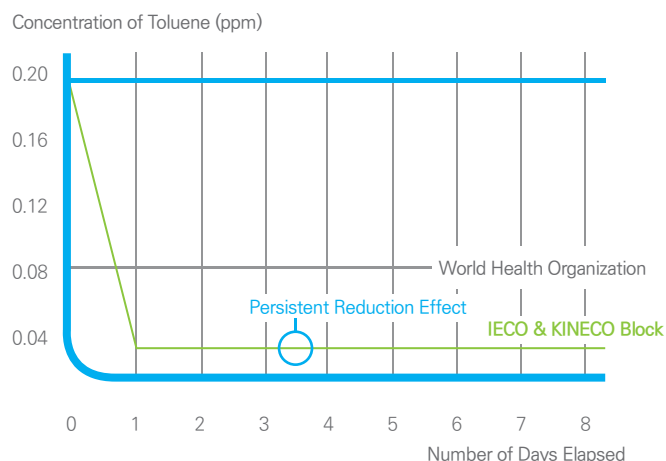

It absorbs moisture when the humidity of the room is high

It releases moisture when the humidity of the room is low

02.Purification of Harmful Substances

- Since it adsorbs volatile organic compounds such as formaldehyde and emits anions and far infrared rays, it is effective to increase the immunity of residents, and also for environmental diseases such as atopic dermatitis.

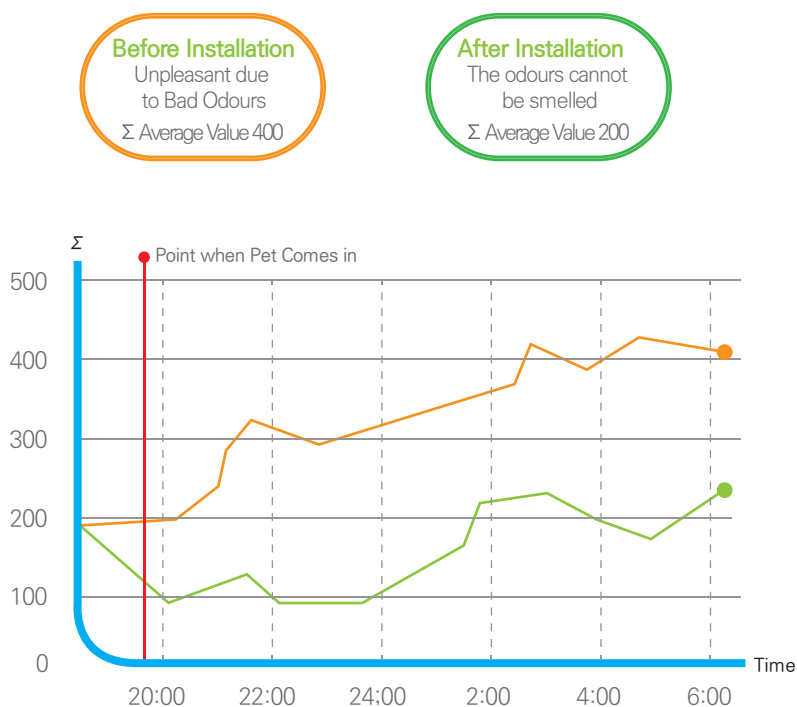

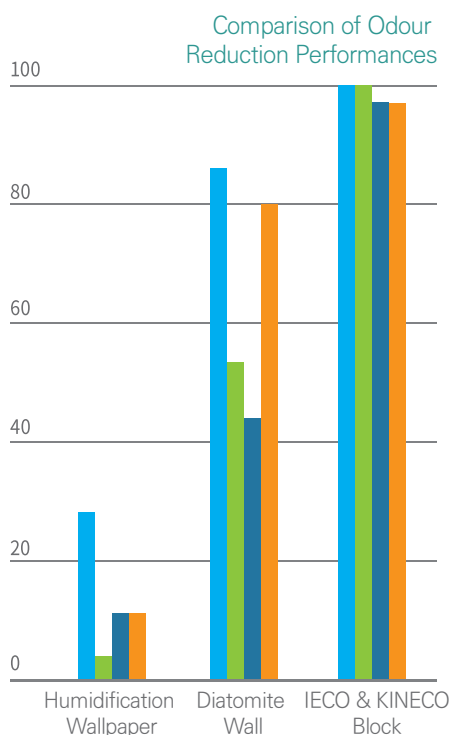

Third of Refreshing

03.Fresh Smell

- It is effective for removing bad odours of food waste (trimethylamine), pet (ammonia + methyl mercaptan), cigarette (sulfurated substance), and so on.

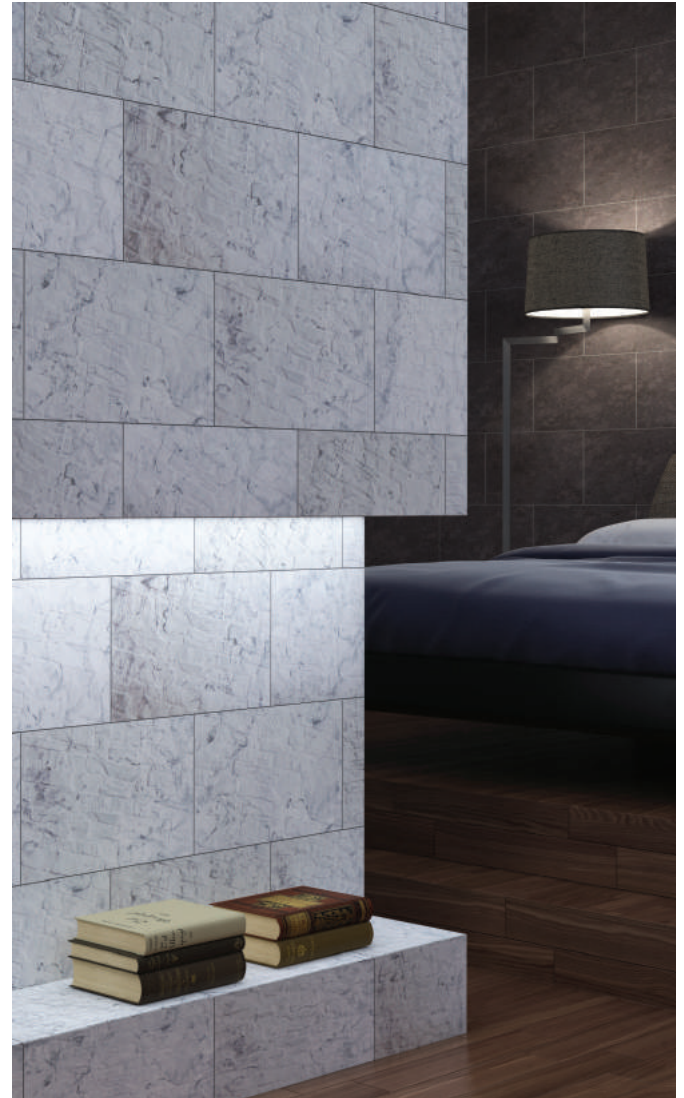

LIVING ROOM

A pleasant and clean space becomes a cosy and comfortable living room where everyone naturally comes together.

To fully demonstrate functions of the product

For the basic eco-friendly functions of IECO, it can "control humidity" "purify odour," and "purify environmentally harmful substances," but to fully demonstrate the functions of the product, please follow the instructions below.

Ventilation is needed to some degree.

We recommend you to ventilate on a clear or dry day. Once ventilated, the functions of Eco Block can be further demonstrated. Ventilation also helps to remove moisture and harmful substances.

Avoid humidification more than necessary.

Note that the original functions are hard to be demonstrated if you excessively humidify the air. Also, be careful not to let the water vapour from a humidifier touch it directly.

Precautions for Use

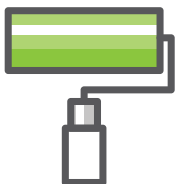

We don't recommend you to install it inside the shower booth where water falls directly.

Do not rub the surface of the product with a roughly-textured sponge or brush for cleaning.

The surface can be damaged.

Do not apply (water, oil) paint or colours to the product.

The pores may be clogged and fail to function properly.

Please ventilate frequently for 1-2 weeks after construction.

After construction, the moisture of the adhesive may be released to the room for a while, and the room humidity may be high.

Be careful that objects with sharp edges do not fall directly on the product surface.

The surface can be broken or cut.

Do not drive a hook or screw into the wall.

If a screw or hook is driven directly into the wall, the product may be broken or damaged. Use an electric screwdriver when installing hooks or screws.
