- [2] Simple measuring by pressing button
- [3] With no electromagnetic waves, measurable with clothes worn
- [4] Portably carried in the pocket
- [5] Power consumption : up to 18 moths if used 24times a day

How to use PAROOS urine detector

[1] Part name

[2] Choose between P-100 P-200 depending on the intended use

| Model No | Color | Thickness of extra clothing (Outer diaper, clothes etc.) | Use example |
|----------|-------|---|---------------------|
| P-100 | | Within 4mm thickness of extra cover excluding urine-absorbing diaper | Single diaper used |
| P-200 | | Within 5~10mm thickness of extra cover excluding urine-absorbing diaper | Double diapers used |

[3] It checks if the diaper is wet enough

Press button with sensor area in full contact on top of clothes.

Indicates with red light is wet area from urination, unwet area is indicated with green light.

Based on the wet diaper area, you can choose to change the diaper.

✗ Use only on diapers

Use the detector only for the intended purpose to check if the diaper is wet or dry.

Its LED light does not mean anything unless used for wet diaper detection.
